Address: 1136, Budapest, Balzac u. 33.

Experience

August 2013 - May 2018

[Quince Hungary / Quince Amsterdam](#)

Late 2014 - MAY 2018

Frontend developer

I was lucky enough, that Quince gave me the time and space to experiment and grow in what interested me, so I gradually became a full-time frontend developer, and work with brands like HTC, Philips, Whirlpool and Bissell.

At first I created static HTML and CSS builds from Photoshop files, provided by our in-house design department. Then fast forward to 2017, and found myself in the lead engineer role of the development of our first real product-minded content creation tools and framework.

In between I built a ton of e-learning content (in the form of special microsites) on a daily basis with our own framework (Vanilla JS, with nunjucks or Pug as templating language, and styled with Sass.). Participated in the maintenance, and feature development of our e-learning platforms and CMS systems.

From 2016 took part in the development of the framework itself (I introduced the templating languages, and some custom, Pug based UI-component alike solution, along with a Gulp and Bower.).

In 2017, as we decided to move towards a product-minded solution, participated in the planning and design of the new product. After a couple of changes in the organisation, I even took over the leading tech role of the development, when I had the opportunity to plan architecture, decide which technologies to use (I chose React and styled-components with the usual mix of Babel, Webpack and npm.).

August 2013 - Late 2014

Content editor

As a content editor, my role was to localize (Quince deals with more than 20 languages on a daily basis.) and customize our e-learning contents, either be Photoshop designs, or static microsites.

To be effective in this role, one should master a mix of a basic skills of a designer, a developer and a software tester, so I dipped a toe in all of these fields a little.

Which eventually lead me to realize what may be my lifelong journey.

February 2008 - August 2013

Oázis Computer

Shop manager, Creative manager, Display specialist

I worked there from the first day, we opened the shop. As the company is a specialist in creative process related hardwares (graphics displays, pen tablets, workstations), my role beside normal store management was to be up-to-date in these product categories. Through the years I became a specialist in high-end graphics displays, calibration and digital color management, both print and online. I wrote hardware reviews, and regularly published on our website. Besides these my responsibility was the day-to-day management of the shop, both online and offline. Later I started to focus on building and maintaining relationships with manufacturers, find new partners industry wide, and new marketing possibilities. We became key partners of DELL, EIZO, WACOM, X-Rite and number one sellers of DELL pro displays in Hungary. I also worked together with our developers and designers, to design, and build our websites, online advertisements and printed material.

Education

2010-2012 (Unfinished)

Óbuda University

Budapest, Hungary

Sándor Rejtő Faculty of Light Industry and Environmental Protection Engineering

Light Industry Engineering

(with the intention to study industrial package design)

2007-2009 (Unfinished)

Óbuda University

Budapest, Hungary

John von Neumann Faculty of Informatics

Computer Engineering

2007-2008

MeshArray Digital Media School

Budapest, Hungary

Adobe Flash Expert

Adobe Certified Learning Program

1996-2004 (graduated)

Katona József Secondary Grammar School and faculty of ICT

Kecskemét, Hungary
